Primary Examiner

The following is an examiner's statement of reasons for allowance: The prior art fails to teach a method for fabricating an image sensor having a device isolation layer with a trench structure and the sensor is integrated with a depletion mode transistor and a typical transistor comprising the steps of: forming sequentially a buffer oxide layer and a pad nitride layer on a substrate and patterning the both layers on a first region for the depletion mode transistor and a second region for the typical transistor by performing a device isolation mask process and an etch process to form trenches in both regions; forming a spacer at lateral sides of the trenches; masking the second region to form a high concentration of a first channel stop ion implantation region at a bottom side of the depletion mode transistor by using high energy; removing the spacer; masking the second region to form a low concentration of a second channel stop ion implantation region using low energy to encompass the lateral sides and the bottom side of the trench in the first region; and burying an insulation material into the trenches.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1) Yang et al 6,184,055 disclose an image sensor structure having a depletion transistor.
